RECYCLED MATERIAL

About recycled fiber

The most suitable method for plastic bottle recycling is material recycling. Material recycling means that the collected plastic bottles are crushed and washed to remove foreign substances such as metal, and then turned into flakes and pellets. This material is then melt-spun as a raw material and undergoes several steps to be recycled into polyester.

RECYCLED POLYESTER PIPING

Biomass PET fiber BIO POLYESTER KNIT TAPE

CREATE NO. **PV209-6**
Polyester

CREATE NO. **PV209-7**
Polyester

Biomass PET fiber

Biomass PET uses biomass mono-ethylene glycol (biomass MEG), which is refined from molasses, which is a sugarcane pomace, as a raw material. This allows about 30% of the PET resin composition to be plant-based.

バイオマスPETは、サトウキビの搾りかすであるモラセス(廃糖蜜)から精製したバイオマスモノエチレングリコール(バイオマスMEG)を原料として使用しています。これによりPET樹脂組成の約30%を植物由来で構成することができます。
